Activity report: 6th European Congress of Medical Physics

I am pleased to report my participation in the 6th European Congress of Medical Physics, held in Valencia, Spain, from September 23 to 26, 2026. With the financial support of the PIANOFORTE program, I had the opportunity to attend this important scientific event and present my research in the DIY Fair with the presentation entitled: “The mAIstro Framework: Automating Complex AI Workflows in Medical Physics with a Multi-Agent System.”

The congress offered an excellent opportunity to present my work to the wider medical physics community and to exchange ideas with professionals and researchers from across Europe. The discussions surrounding my research provided valuable feedback and created opportunities for potential future collaborations.

I was also very pleased that my presentation received the Best Do It Yourself (DIY) Presentation – Public Vote Award, which was a particularly rewarding recognition of the work presented.

Overall, participation in the congress was a highly valuable and enriching experience. It contributed to my professional development, provided important exposure to recent advances in medical physics, and offered opportunities to strengthen my scientific network within the European medical physics community.

Heraklion, Crete, 30/09/2026

Eleftherios Tzanis Msc, PhD

Postdoctoral Researcher

Artificial Intelligence and Translational Imaging (ATI) Lab, Department of Radiology, School of Medicine, University of Crete, Heraklion, Crete, Greece

This partnership has received funding from the European Union’s “EURATOM” research and innovation program under the 101061037 grant agreement.
