
PIANOFORTE travel grant activity report

Alice Alves, MD

ULSSJ, Portugal

Digital Poster E26-2729 at ESTRO26

Digital Poster E26-2751 at ESTRO26

The annual congress of the European Society for Radiotherapy and Oncology (ESTRO) is essential for presenting the latest research in the field of Radiotherapy each year. In 2026, the event brought together thousands of professionals from across Europe and other regions, providing a valuable platform for scientific exchange and professional development.

During the congress, I had the opportunity to present my research through a two digital posters titled: **'Hearing Functional Assessment After Stereotactic Radiosurgery for Vestibular Schwannomas: Four-Year Single-Institution Experience'** and **"Clinical Outcomes, Toxicity, and Cosmetic Results of HDR Plesiotherapy for Non-Melanoma Skin Cancer"**.

The presentation and participation in this congress allowed me to interact with other clinicians and researchers, who provided relevant feedback and raised important questions. Participation in ESTRO 2026 also provided access to lectures and sessions on the latest advances in radiotherapy, in addition to exposure to new technologies presented at the industry exhibition. These experiences will directly contribute to the improvement of clinical practice and guide future research.

Overall, my participation in ESTRO 2026 strengthened my professional network, increased the visibility of my research, and provided new perspectives regarding the latest updates in the field of radioncology. This experience significantly contributed to my scientific development and will continue to positively influence my clinical practice and research activities.
