
Radiological Society of North America (RSNA) 2023 Conference Attendance Activity Report

Conference Details:

Event: Radiological Society of North America (RSNA) 2023 Annual Conference

Location: McCormick Place, Chicago, Illinois, United States of America

Dates: November 26th-30th, 2023

Overview:

Attending the RSNA 2023 Annual Conference was an enriching and insightful experience. The event, spanning five days, brought together industry leaders, innovators, and experts from various spectrs of radiology, fostering an environment ripe for learning, networking, and idea exchange.

Day 1:

The conference commenced with an inspiring keynote address by the President of the RSNA. His insights into the future trends and disruptive innovations forthcoming in radiology, especially in regrads to artificial intelligence (AI) set the tone for the event. I attended sessions focusing on emerging technologies, including AI integration in our field, which provided valuable perspectives on potential implementation strategies.

Day 2:

The second day delved deeper into specialized workshops and had some interesting plenary sessions. I participated in a workshop on raduation protection. I learned best practices in implemmenting radiation protection in a clinical enviorment. The plenary sessions were thought-provoking, especially the one centered on theranostics, demonstrating how powerful of a technique it can be.

This partnership has received funding from the European Union's "EURATOM" research and innovation program under the 101061037 grant agreement.

Day 3:

The third day was the day of my talk and I presented my research on the development of Compton Imaging for low dose imaging in Nuclear Medicine. I believe my talk was well received and I got some interesting questions from the audience. Prior to my talk I also attended a talk in regards to AI implementation in Nuclear Medicine, it was very interesting to see different people's approach but most speakers voiced caution in its unchecked implementation in clinical practice.

Day 4:

The conference started winding down in the last day with some very interesting poster sessions covering a wide range from breast imaging to radiotherapy. I had a chance to engage with poster presenters about their research and exchanged details with a couple. The RSNA also had a recruiters centre which I thought was a great idea because it allowed me to talk directly with potential employers.

Key Takeaways:

Networking: Engaging with professionals from diverse backgrounds broadened perspectives and created potential collaboration opportunities.

Cutting-Edge Insights: Access to the latest trends and innovations in our industry provided actionable ideas for implementation.

Personal Growth: Interacting with industry leaders and participating in discussions enhanced leadership and problem-solving skills.

Sincerely,

Bill Kamtchou
